

probably moving spores from diseased plants to healthy plants by landing on them when searching for spore-filled honeydew in the diseased plant population. — *Kathleen M. Lemon, The Nature Conservancy, 1815 North Lynn St., Arlington, Virginia 22209.*

ACKNOWLEDGMENTS

Thanks to Carol Horvitz, David Janos, and Helen Alexander who made useful comments on the manuscript. D. A. Grimaldi identified the fly and M. C. Thomas identified the beetle. This work was supported by the Pratt Predoctoral Fellowship from Mountain Lake Biological Station, University of Virginia, and by the Jerry Curtis Plant Sciences Scholarship from the Department of Biology of the University of Miami.

A NEW HOMONYM IN THE MEZIRINAE (HEMIPTERA: ARADIDAE)

In 1967 I established a new genus, *Argocoris* Kormilev, for a new described species, *Argocoris grossi* Kormilev, from Queensland, Australia (Kormilev, 1967, *Rec. S. Austral. Mus.* 15:519). I have been advised that *Argocoris* Kormilev, 1967, is a junior homonym of *Argocoris* Mayr, 1864, Hemiptera: Pentatomidae (*Verh. Zool. Bot. Ges., Wien*, 14:905) which was created for *Argocoris redtenbacheri* Mayr, 1864.

To rectify this homonym, I therefore now propose the replacement name of *Pseudoargocoris* Kormilev, new generic name, for *Argocoris* Kormilev, 1967. — *Nicholas A. Kormilev, 211 Pasadena Avenue N., Apt. 312, St. Petersburg, Florida 33710.*

ACKNOWLEDGMENT

I thank Dr. R. C. Froeschner (Smithsonian Institution, Washington, D.C.) for bringing this situation to my attention.
